Conclusions

Public Transport

- The hypothesis from which this study began were confirmed in the case of public transport impact on country development, the coefficient was significant and positive, moreover greenhouse emissions also have a positive significant impact on country development.
- On the other hand, public transport show that it has no impact on labor market. The factor variables could not explain the variation of the labor market for this data set.
- More research is needed before we can conclude on a general level that public transportation has no impact on labor market.
