Socio-economic impacts at the local level

- But climate change also raises questions in terms of **well-being** of human (local) populations (*Pecl et al., 2017; Weissbecker, 2010*)
 - heating waves
 - various pollutions
 - flooding
 - erosion of coastal zones...
- These ecological impact lead to the **displacement of populations** or to major losses in terms of **well-being**
- All these issues are related to the **development** of human activities and exploitation of **natural resources**

Number of circular economy establishments per km² in 2008 and 2015 (density): very urban

Conclusion

The road to sustainable territorial development

Participants: OANA-MATILDA SABIE, Daniela Constantin, André TORRE, Armenia Androniceanu

André TORRE is talking...

The essential role of local cooperative behaviors

- **The role of cooperation** between local actors proves to be **essential**, at least at three levels:
 - **Technical Cooperation** between the production actors around the recycling projects
 - **Cooperation** and **exchanges** between the actors around joint and coordinated **projects** at the level of territories
 - **Cooperation** and involvement of **local populations**, in order to avoid **conflict** and **opposition**
